

ECOSLIDE-RX®

Measured dosing of opioids in easy-to-dispense CR Blister Packaging

- Limited days of dosing
- Lower quantity prescriptions
- Child-resistant, re-closable locking
- Helps patients identify each dose
- Reduces confusion and accidental misuse

Blister-based dispensing of controlled substances can help in the fight against opioid abuse.

To help combat the ongoing opioid epidemic in the U.S., the FDA and the Institute for Safe Medication Practices (ISMP) are encouraging changes to product packaging that help to deter abuse. This specifically includes promoting the use of limited doses dispensed in blister packs.

The Ecoslide-RX blister package can be easily configured to contain a limited fixed amount of a controlled substance. Limited days of dosing are presented in blister packs, encouraging doctors to responsibly prescribe lower-quantities of opioid medication.

Ecoslide-RX offers additional benefits, as it eliminates pill-count errors when dispensing, contains numerical identification of each dose, features visual organization of pills, and combines product protection with ease of opening. Ecoslide-RX also has a re-closable locking feature designed to offer consumers a safe yet streamlined experience. This child-resistant feature can be disabled by the pharmacy staff for those with dexterity issues, making the medication accessible to all patients.

True to its name, the Ecoslide-RX is made from 100% recyclable paperboard that is easily separated from its internal blister for recycling. Its broad format allows for large, easy-to-read type on all sides of the package for clear product identification.

Legacy Packaging has a fully integrated packaging line exclusively designed to run Ecoslide.
